

▶ CT 582

The UV safety feature is being used on almost all banknotes worldwide. These features are made visible by UV-lamps and will show (partly) hidden pictures.

Most of the time the whole banknote will lighten in case of counterfeit notes and not only the parts that contain the 'UV-signature'.

The **CT 582** checks all banknotes and other official documents such as credit cards, driving licenses, passports with UV-characteristics. Quick and simple!

MAIN FEATURES

- ▶ checks all UV-characteristics
